SUMMARY

I am a customer-focused Full-Stack Developer specializing in the MERN stack. My expertise lies in using enterprise-level languages and frameworks to build scalable applications. With a problem-solving approach, I prioritize delivering efficient solutions. I utilize Node.js and Express.js for the back-end, MongoDB for data storage, and React.js for interactive front-end development. Following industry best practices, I ensure code quality, testing, and continuous integration. My skills extend to HTML, CSS, and JavaScript, and I emphasize responsive design principles. I am dedicated to staying up-to-date with the latest technologies and delivering high-quality applications.

TOOLS:

Javascript,Typescript,React,ExpressJS,MongoDB,Mysql,Node Js,NextJs,Go,C#

EXPERIENCE

Acealth, Nigeria — Full-stack developer

April 2022 – December 2023

- Building the Company's User Interface: As the lead Full-Stack Developer, I would work closely with the design team to create a visually appealing and user-friendly interface for the company's website. This would involve wireframing, prototyping, and implementing responsive designs that cater to the needs of both desktop and mobile users.
- Leading the Team of Developers: I would take charge of assembling and managing a team of talented developers. This would involve assigning tasks, providing guidance and support, and ensuring effective collaboration. By fostering a positive and productive work environment, we would work together to develop and deploy the website and database.
- Starting up the Website and Database: Alongside my team, I would handle the entire development process, from setting up the necessary infrastructure to implementing the back-end and front-end functionalities. This would involve selecting appropriate technologies, such as the MERN stack, and designing and implementing a robust database architecture for efficient data storage and retrieval.
- Engaging Physical Therapists: With a customer-centric approach, I would focus on engaging physical therapists to utilize the company's services. This would include market research, identifying target audiences, and developing strategies to reach and attract physical therapists. By analyzing data and gathering feedback, we would continuously improve the website and its features to ensure a high engagement rate.

Eclat Technologies, Lagos— Backend Developer

April 2023– Present

- ◆ Building the Company's API: As a Full-Stack Developer, I would be responsible for designing and developing the company's API (Application Programming Interface). This would involve understanding the requirements of the system, creating the endpoints for data communication, and ensuring secure and efficient data transfer between the front-end and the database.
- ◆ Managing the Database: I would take charge of building and managing the company's database. This would include designing the database schema, selecting an appropriate database management system (such as MongoDB or MySQL), and implementing efficient data storage and retrieval mechanisms. I would also ensure data integrity, security, and scalability as the company grows.

ACHIEVEMENTS

- Led my state team to the national science competition and won silver medal
- Developed a bot for Blue Saturn , a project focused on giving developers easy access to recruiters
- Built a database for keeping student records in my faculty
- Built a discord Bot for blue saturn that is focused on linking developers to recruiters
